MUSTARD ESSENTIAL OIL

A distinctive mustard-derived aromatic ingredient for formulation and ingredient applications.

MUSTARD SEED • BOTANICAL INGREDIENT • AROMATIC PROFILE

Product overview

Mustard-derived oils are not all the same. The term “mustard essential oil” may refer to a volatile oil or another mustard-derived ingredient, depending on the manufacturing process. Confirm the exact botanical species, plant part, extraction method and composition from the supplier’s specification before using technical, safety or marketing claims.

Aroma and character

The aroma and sensory profile depend on the mustard species and production process. Use the batch-specific technical data and sample evaluation to describe the supplied material.

Potential application areas

- Fragrance and aroma formulation, where suitable
- Cosmetic or personal-care development, subject to safety assessment
- Ingredient research and product development

Formulation considerations

Mustard-derived volatile materials can contain potent constituents and may have strict use limitations. Do not assume suitability for skin, food, aromatherapy or other uses without product-specific regulatory and toxicological review.

Identity to verify

Confirm the botanical name, seed or other plant part, extraction process, chemical composition, grade and intended use. In particular, distinguish volatile essential oil from fixed mustard oil.

FOR FORMULATION PROFESSIONALS

Quality checks and responsible use for mustard-derived ingredients.

Buyer and quality checklist

Before selecting the material, review its technical documentation and test it in the intended product base. Confirm appearance, odour, composition, compatibility, stability and packaging suitability under relevant storage conditions.

For buyers and formulators	Batch documents to request
• Confirm intended application and grade. • Review a representative sample. • Check compatibility and stability. • Obtain a qualified safety assessment before use.	• Batch-specific Certificate of Analysis (COA). • Safety Data Sheet (SDS). • Botanical identity and plant part. • Extraction method and composition profile. • Regulatory and allergen declarations, as applicable.

Handling and safety

Follow the supplier's SDS and applicable regulations. Do not apply undiluted to skin or use in food, aromatherapy or cosmetic products unless the exact material and use are specifically approved by a qualified safety and regulatory assessment. Avoid eye contact, keep securely closed and out of reach of children.
