BLACK CUMIN OIL

A botanical seed oil for ingredient, personal-care and formulation development.

NIGELLA SATIVA • SEED-DERIVED OIL • BOTANICAL INGREDIENT

Product overview

Black cumin oil, also known as black seed oil, is obtained from the seeds of *Nigella sativa*. It is a fixed vegetable oil with a characteristic seed-oil aroma. Its colour, flavour, fatty-acid profile and minor constituents can vary with seed origin, pressing method, filtration and storage. Confirm the supplied material's grade and batch specification before describing its properties or intended use.

Ingredient profile

A seed-derived fixed oil. Sensory characteristics and composition depend on the raw material and processing. Use supplier batch data for accurate product descriptions.

Potential application areas

- Cosmetic and personal-care formulations, if cosmetic grade
- Soap and body-care product development
- Food applications only where food grade and legally compliant
- Ingredient research and formulation trials

Formulation considerations

Assess odour, colour, oxidation stability and compatibility in the intended base. Check allergen, contaminant and microbiological requirements relevant to the finished product and market.

Identity and grade to verify

Confirm *Nigella sativa* seed as the source, cold-pressed or other extraction method, refining and filtration status, additives or carrier oils, and fatty-acid profile. Do not assume food or cosmetic suitability from the product name alone.

FOR INGREDIENT BUYERS & FORMULATORS

Quality checks, batch documentation and responsible handling.

Quality and evaluation checklist

Review supplier documentation and test a representative sample in the intended product base. Check appearance, aroma, compatibility, oxidation stability and packaging suitability.

For buyers and formulators	Batch documents to request
• Confirm intended application and grade. • Review a representative sample. • Assess compatibility and stability. • Confirm applicable use levels and regulatory requirements.	• Batch-specific Certificate of Analysis (COA). • Safety Data Sheet (SDS), where applicable. • Botanical identity and seed source. • Extraction and refining / filtration details. • Fatty-acid profile and relevant quality tests.

Storage and handling

Follow the supplier's storage instructions. Protect the oil from excessive heat, light and air exposure where appropriate to preserve quality. Keep the container tightly closed and use only in applications supported by the verified grade and technical documentation.
