BAWACHI OIL

A seed-derived botanical oil for ingredient evaluation and formulation development.

BAWACHI / BABCHI • SEED-DERIVED BOTANICAL • INGREDIENT PROFILE

Product overview

Bawachi oil, also known as Babchi oil, is associated with the seeds of *Cullen corylifolium* (synonym: *Psoralea corylifolia*). Commercial materials may be seed oil, an extract, or a preparation blended with a carrier oil. These forms are not interchangeable. Confirm the exact ingredient type, composition, processing method and batch specification before making product or performance claims.

Ingredient profile

A botanical seed-derived material whose colour, odour, composition and strength depend on the source material and processing. Use batch-specific documentation to describe the actual product.

Potential application areas

- Cosmetic ingredient research and development
- Personal-care formulation assessment, only where permitted and safety-cleared
- Botanical ingredient evaluation
- Product formulation trials

Formulation considerations

Verify whether the material is a fixed oil, concentrated extract or diluted preparation. Assess compatibility, stability, composition and regulatory suitability for the intended market and finished-product category.

Identity to verify

Confirm botanical name, seed source, extraction method, carrier or solvent, concentration, standardised constituents and any added ingredients. Do not assume a particular grade or purity from the common name alone.

FOR INGREDIENT BUYERS & FORMULATORS

Quality checks, documentation and responsible handling.

Quality and evaluation checklist

Review the supplier's technical documents and test a representative sample in the intended product base. Check appearance, odour, composition, compatibility, stability and packaging suitability. Use only after confirming the material's identity and permitted application.

For buyers and formulators	Batch documents to request
• Confirm exact ingredient form and grade. • Review a representative sample. • Assess compatibility and stability. • Verify regulatory and safety requirements for the intended use.	• Batch-specific Certificate of Analysis (COA). • Safety Data Sheet (SDS). • Botanical identity and plant part. • Extraction, carrier and concentration details. • Relevant composition and contaminant tests.

Important safety note

Babchi-derived ingredients may contain psoralen-related constituents that can increase sensitivity to ultraviolet light and may cause serious skin reactions. Do not use this oil directly on skin or recommend sun exposure after use. Any cosmetic application requires verified composition, regulatory review and a qualified safety assessment. Do not ingest unless the specific product is documented and authorised for food use.
